The paper discusses that tourism is travel for pleasure; also the theory and practice of touring, the business of attracting, accommodating, and entertaining tourists, and the business of operating tours. Tourism is international, or within the traveler's country. Now, tourism is a major source of income for many countries, and affects the economy of both the source and host countries, in some cases being of vital importance. Recreation is an activity of leisure. The 'need to do something for recreation' is an essential element of human biology and psychology. One of the regions of promising tourism development in Ukraine is the Khmelnytskyi region, which is characterized by advantageous features of its geographical location, favorable climate, and rich tourist and recreational potential. The tourism industry is an important component of the Khmelnytskyi regional and Ukrainian state's development and is of great importance on the whole for the economy and social sphere.

Khmelnytskyi region has huge natural resources for the dynamic development of tourism and recreation. In fact, as you know, the natural resource potential of a specific territory is formed by the combination of its natural conditions and resources. Khmelnytska oblast ranks first in the country in terms of land provision for recreational purposes and natural recreational resources rank second in the structure of its natural recreational potential. The natural recreational resources of Khmelnytskyi region include favorable climatic conditions, picturesque landscapes, large forest areas and also mineral water sources near Sataniv. A significant part of the historical and cultural heritage is concentrated in the Kamianets-Podilskyi – famous historical city. Kamianets-Podilskyi city-museum includes more than 100 attractions. Unfortunately, currently the recreational potential of the region is not used to its full extent, which is explained by the peculiarities of regional management and weak promotion of the region for the needs of tourism and recreation.

Key words: tourism, recreation, historical and culture tourist attractions, balneological resources, Khmelnytskyi region.

**Introduction.** Nowadays, tourism and recreational activity as a massive social economic phenomenon is becoming an important stimulus for regional development. The scopes and effectiveness of this activity depend on many factors, and the leading place among them is occupied by the presence of strong recreational potential in the regions. The recreational resources are the prerequisite for the formation and effective functioning of strong territorial recreational complexes at the national and regional levels.

**Background.** The study of the researched problem was frequently carried out. Significant aspects of resource and resource recreational issues are thoroughly investigated in works of domestic scientists: O. O. Beydyk, Zh. I. Buchko, O. O. Lyubitseva, M. P. Malska, V. I. Matsola, I. H. Smyrnov, I. V. Smal, V. I. Staffychuk, N. V. Fomenko, I. M. Yakovenko and others.

**Purpose of the study.** Thus, the main task of the paper is to define the resource and recreational potential of Khmelnytskyi region, as well as to explore the touristic possibilities of this area.

**Interpretation of the study.** An important part of recreational resources are natural resources, which include landscapes, nature components, which are used in recreation and tourism sphere (geological, orographic, climatic, hydrological, and soil-planty).

One of the main factors is the relief, which determines a stage of territory’s suitability for recreational activities. The whole area of Khmelnytska oblast is a raised plain; however, there are different landforms. Among them there are flat and waved uplands, broad valleys and narrow canyons, sloping hillsides and rapid ledges, detached hills and massifs.

The region has a temperate climate, with a warm summer, mild winter and a sufficient amount of precipitation. The average annual air temperature varies from 6.8°C in the north and center of the region to 7.3°C in the south. July is the warmest month, and January is the coldest. The highest indexes of annual air temperature in summer are observed in the southern part of oblast (18.8°–19.3°C), and the lowest – in the north (18.5°C); and in the west (18.3°C). The annual air temperature in January is the lowest in the central part of the region (~ 5.4°C), because this area is the highest woodless part of the upland. The northern part has a bit higher indexes of temperature (~ 5.5°C), as well as the southern part (~ 0.5°C). Continental air masses cause the great fluctuations of air temperature during all the seasons. The air can heat up to + 34°C in summer (absolute maximum in August 2000) and cool to – 31°C in winter (absolute minimum in January 1987). There is a sufficient amount of precipitation on the territory of the oblast (530 – 670 mm per year). The
an annual amount of precipitation is 643 mm, the greatest index – 901 mm [5].

Climatic peculiarities of the region also help to build climatic-therapeutic institutions, to relax and to improve health using climatic resources. Climatic conditions are favorable for summer and winter relaxation.

Khmelnitskyi oblast ranks sixth among the other regions of Ukraine for freshwater resources. The rivers of this area belong to the watersheds of such rivers as the Dniester, the Dnieper and the Southern Bug. Khmelnitskyi region has numerous groundwater resources that consist of subterranean waters and groundwater resources. The subterranean waters are situated at the depth of 4–10 m. The groundwater resources are situated in 3 aquifers at the depth of 16 m, 30–40 m and 60–80 m. There are more than 3 hundred rivers with the overall length of 10 000 km and there are about 120 rivers with the extension of more than 10 km in Khmelnitskyi oblast. Among these rivers 10 have the length more than 100 km. The largest rivers recreational resources are located in the central and northern areas and the most important are the Southern Bug and the Dniester with its tributaries. There everyone can takes part in water kayaking tours and organizes the tourism competitions [4].

Khmelnitska oblast is not considered to be one of the lake regions of Ukraine. There are less than 50 natural reservoirs with the area with of 1 hectare or more. There are about 200 lakes in Khmelnitskyi region. Podilskyi lakes are situated in 3 aquifers such as the Horyn, the Southern Bug and the Dniester. There are a lot of conditions for the development of such recreational activities as boating, catamaran sailing, swimming, traveling, sun and air bathing.

The largest reservoirs are Shedrivske (1258 hectares) and Anastavskie (1168 hectares) on the river Buzhok, Kuzmynske (765 hectares) on the river Sluch, Malomolynetske (330 hectares), Novosyavivske (270 hectares) in Khmelnitskyi region, Mysiatynske (302 hectares) in Shepetivskie region. The highest number of small reservoirs and ponds is located in the watersheds of the Southern Bug and the Horyn and they are built on the cascade principle. The lowest number of them is in the Dniester watershed [6].

Small reservoirs and ponds are valuable and interesting natural objects, which are needed to use more for recreation and leisure. Bogs are distributed mainly in the north in floodplains the Horyn, the Sluch and others.

Mineral waters. Valuable minerals are mineral waters, they are used in the balneology and the thermal waters are studied as an energy source. Mineral underground waters have medicinal properties due to high content of bioactive components. In Ukraine was discovered a fairly significant resources of different types of mineral waters. Right Bank Geological Expedition discovered and explored 6 deposits of different types of mineral water in Khmelnitskyi, they are Zbruchanske, Zaychikivske, Makivske, Teofipolske, Polonsky, Shepetovskie and 4 deposits are in the exploration stage, Kamyanets-Podilsk, Volochyske, Spasivske and Lenkovske. Medicinal properties of water have been studied and continue to be studied.

Land Fund of Khmelnitskyi region is 2062.9 thousand hectares, it is approximately 63% of the area is agricultural land. The soil area is characterized by considerable diversity. The most common is the black soil and steppe podzolized soils, which occupies small areas of meadow, meadow-black, light gray and gray forest, others.

The most suitable for rest and recovery among plant resources are forests. Besides aesthetic qualities, forest performs health and hygiene function. There are 1603.7 thousand hectares of forest lands in the region. The main parts of the forests are concentrated in the region of Polissya. The most common forest tree species: pine, oak, hornbeam usual, maple, birch, sessile oak, aspen, black alder.

These species occupy about 4/5 of the area covered by forest. Pine forests cover about 30%, and oak – 40% of the forest land. There are 269 objects of the nature-protected areas in the region, including 8 monuments of landscape architecture (Antoninskyi, Holozubynetskyi, Malievetskyi, Myhalivske, Novoselytskyi of Polonksy district, Novoselytskyi of Starokostiantyniv district, Polonsky, Samchikivskiy parks). The National Park “Podolski Tovtry” is located in the region. Smotrych canyon is the nature recreation area in the valley near the Smotrych River. The famous cave is located in the village Cherche [3].

There are 3 natural reserves in the region (National Historical and Architectural Reserve “Kamianets”, State Historical and Cultural Reserve in Kamianets-Podilskyi, State Historical and Cultural Reserve “Samchiky”) and 9 museums. The total number of monuments of archeology, history, architecture, town planning and monumental art in the Khmelnitsky region is 2,015 units.

The objects of the nature-protected areas include:

- The landscape reserve of national importance “Sovyi Yar”, located in in the valley of the Studenitsia River. It is located on the territories of Kolodiivskva, Krushanivska, Kytaihorodska, Kalachkovska village councils of Kamianets-
Podilskyi district;
- Botanical nature monument of national importance “Tovtra Samovyta”, located near Zaluchchia village of Zaluchanska village council of Chemerovetskyi district;
- Hydrological reserve of national importance “Bashta”, located in the Southern Bug flood plain between the villages Stavnytsia, Trebuhivtsi and Holovchentsi in the Letychiv district.
- Geological nature monument of national importance “Smotrytskyi Canyon”, located in the territory of the Smotrych river canyon from Holoskiv village to Tsybulivka village of the Kamianets-Podilskyi region;
- Unique for Ukraine and Europe geological nature monument of national importance “Cave Atlantis”, this is located on the outskirts of Zavallia village in Kamianets-Podilskyi district;
- Unic azonal natural complex in the north of the Khmelnytska oblast – hydrological natural attraction of the national importance “Lake Sviate”, which is situated on the territory of Radoshiv Village Council of the Isiaslav Rayon.

In addition to the above-mentioned territories and objects of the Ukraine Nature Reserves, there are two wetlands of the international importance: “Bakota Bay” on the area of 1590 hectares and “The Lower Reaches of the Smotrych” on the area of 1480 hectares, which were founded to protect the population of rare species of waterfowl (Figure 1).

Fig. 1 Assessment of socio-historical recreation resources of Khmelnitsky region

Summing up the ratings of aesthetic of the administrative regions rayon territories, evaluation according to their provision of climate, water and forest resources and considering the indexes of recreational burdens, the integral mark estimation of the region territory provision of nature recreational resources. Socio-historical recreational resources are objects and anthropogenic phenomena involved in the field of recreation and tourism. The social and historical resources include historical and architectural, biosocial and resources of the event [1]. The importance of socially-historical
recreational resources of Khmelnytskyi region is defined by the presence of monuments, archaeology, history, culture and ethnography. These are all attributes of the territorial-recreational complex.

Archeological monuments. Currently, the accounting department of protection of culture monuments Khmelnytskyi Regional Museum has over 2 thousand archaeological sites, of which 226 are under state protection.

Fig. 2 Natural and Recreation Resources Potential

Zhvanets village went down in history thanks to the famous battle of the regiments of Bogdan Khmelnitsky against Polish army in the years of national liberation war of the XVII century. About that time remind the remains of the fortress. Besides, this settlement lies on the international highway Vaskovychi-Porubne and borders the Chernivtsi region. Through this village includes several tourist routes. However, the main object is the fortified settlement of Trypillya culture in the tract Schovb. It was here in the early 70-ies expedition of the Kyiv archeologist T. Movshi found a unique pottery complex, which consists of Bunk stoves and space for mixing clay. Pottery kiln located three rows above the slope of the plateau [1].

A lot of interesting archaeological information keeps Teremetska Mountain. It is downhill northwestern slope – Trypillya settlement. Nearby – cave. Then – beautiful rock
with strange reconciliation. In the West – the remnants of flint production. The top of the mountain in ancient times was a fortified settlement one of the three settlements of the capital Ponyzzya Bakota. Near the village found a unique bronze hooks horse harness of Scythian time. Dunayevtsi region is intended to illustrate the protection system of the Eastern border of Galicia in the interval between the Dniester and Bolohivska ground. In the area of the Sokilets village, a complex of ancient monuments: the settlement in the tract Son-mountain, twelve settlements and two burial ground. According to Galician Polish researcher, the settlement is the remains of the ancient city Sokolyne Gnizdo. Considerable scientific scales to this complex provide two burial mounds, (late XI century) and paplite (XII–XIII centuries).

Historical and cultural heritage of Khmelnyczchyna is a powerful socio-cultural environment not only Slavic but also the world’s spirituality. Historical and cultural monuments are buildings, memorable places and objects connected with historical events in the life of the people, the development of society and the state, the material and spiritual works of art, which have historical, scientific, artistic or other value. Khmelnystsyy region is rich in historical and cultural monuments of national importance. There are 3020 monuments of history and culture, which are registered on January 1, 2016 and under the state protection, including: 2442 – of history, 105 – of archaeology, 473 – of art. 17 of them are included in the list of historical, monumental art and archeology of national importance: 4 – of history, 12 – of archeology, 1 – of art. The bulk of them concentrated in Kamianets-Podilskyi.

Due to the unique combination of historical, architectural, city building heritage and canyon’s landscape of Smotruch River, ancient Rus and medieval part of the city declared a state historical and architectural reserve. Number of monuments XV–XIX centuries counts about 200 buildings. Powerful fortifications are in “Old Town”. Fortress and its bridge, combination of cult constructions of different religions produce an inimitable impression.

No less famous fortifications are built in Medzhybizh and in Starokostiantyniv also. Medzhybizh is famous in its own way, where the tomb of the founder of one of the biggest movement of the Jewish faith – Hasidism – Baal Shem Tov is situated, that is a kind of Mecca for religious Hasidic pilgrims.

Iziaslav – one of the oldest Ukrainian cities of contemporary Khmelnyczchyna. The real adornment of Iziaslav during four centuries was the palace ensemble of princes Sanhushko.

There are remains of the castle buildings in the region: Letychiv, Chornokozyntsi and Sataniv fortresses.

These sacred buildings are important among the historical and cultural monuments of Khmelnyczchyna: Pokrovskva church-fortress in Sutkivtsi, Synagogue in Sataniv, Cathedral of Saints Peter and Paul in Kamianets-Podilskyi, St. Michael Church in Zinkiv.

Conclusions. Analysis and evaluation of natural recreational resources and historical and cultural heritage show that, in the perspective, there can be developed a strong territorial and recreational complex on the territory of Khmelnystsyy Region. In order to promote territorial recreational complex, we need to protect, restore, maintain the condition and increase the number of nature reserve objects and objects of historical cultural heritage. Many monuments are in disrepair. They require reconstruction and recovery. Government budget revenues are limited because of the difficult economic situation in the country. Most of the monuments are not included to the tourist routes, and therefore they are not involved in the travel process. That is why, detection, carrying out of advertising campaign, preservation and complete usage of natural resources, historical and cultural heritage of the region are one of the most urgent tasks.

РЕСУРСНО-РЕКРЕАЦІЙНИЙ ПОТЕНЦІАЛ ХМЕЛЬНИЦЬКОЇ ОБЛАСТ І

У статті йдеться про туризм – це подорож зар ади задоволення; також теорія та практика турів, залучення, розміщення та розваги туристів та бізнес з організації турів. Туризм може бути міжнародним або всередині країни мандрівника. Сьогодні туризм є основним джерелом доходу для багатьох країн і впливає на економіку як країни походження, так і приймаючої країни, а в деяких випадках має життєво важливе значення. Відпочинок – це дозвілля, причому дозвілля – це час на власний розсуд. Потреба працювати, щоб забезпечити відпочинок, є важливим елементом для існування та психології людини.

Одним з регіонів перспективного розвитку туризму в Україні є Хмельницька область, яка характеризується вигідними особливостями географічного розташування, сприятливим кліматом, багатим туристично-рекреаційним потенціалом. Туристична галузь є важливою складовою розвитку держави в Україні, яка має величезні природні ресурси для динамічного розвитку туризму і рекреації. Як відомо, природно-ресурсний потенціал на конкретній території формується поєднанням її природних умов і ресурсів. За рівнем забезпечення землями рекреаційного призначення Хмельницька область займає перше місце в країні, а природні рекреаційні ресурси займають друге місце в структурі її природнорекреаційного потенціалу. До природних рекреаційних ресурсів Хмельницького району належать сприятливі кліматичні умови, ландшафтити, значні лісові масиви, а також джерела мінеральних вод поблизу Сатанова. Значна частина історико-культурного спадщини зосереджена в м. Кам'янець-Подільський. Місто-музей Кам'янець-Подільський включає понад 100 пам'яток. Нажаль, сьогодні рекреаційний потенціал області використовується не в повній мірі, що пояснюється особливостями регіонального господарювання та слабкою промоцією регіону для потреб туризму та рекреації.

Ключові слова: туризм, рекреація, історико-культурні місця, бальнеологічні ресурси, Хмельницька область.

ПЕРЕДУМОВИ ТА ТУРИСТСЬКО-РЕКРЕАЦІЙНЕ ЗНАЧЕННЯ САКРАЛІЗАЦІЇ ПАМ'ЯТОК НЕЖИВОЇ ПРИРОДИ В ІВАНО-ФРАНКІВСЬКІЙ ОБЛАСТІ

На Прикарпатті є велика кількість геолого-геоморфологічних пам'яток, які мають крім наукового значення ще й сакральне, оскільки об'єкти неживої природи були одними з перших, які люди використовували в релігійному житті, наділяли їх надприродною силою. На сьогодні, багато геолого-геоморфологічних об'єктів Івано-Франківської області мають значний потенціал для використання в релігійному туризмі і формуванні духовно-релігійного світогляду населення.

Ключові слова: природні передумови, сакральні об'єкти неживої природи, геологічні пам'ятки, геоморфологічні пам'ятки, Івано-Франківська область.

Постановка науково-практичної проблеми, актуальність і новизна дослідження.

Івано-Франківщина (Прикарпаття) традиційно вважається однією з найрелігійніших областей України, де, крім об'єктів сакральної архітектури (церков, храмів, монастирів, тощо), сформувалися осередки духовності, основою яких є об'єкти природного походження, що мають сакральний зміст і беруть участь у формуванні духовно-релігійного світогляду населення.

XXI століття є часом глобальних викликів для суспільства, особливо для України, оскільки, крім об'єктів сакральної архітектури, виникла нова проблема - карантин, що кардинально змінила життя людей і значно трансформувала особливості організації рекреаційної діяльності, наша держава зазнала безпрецедентної економічної кризи. У період пандемії Covid-19, карантинна обстановка стала одним з головних факторів, що вплинуло на розвиток туристсько-рекреаційної діяльності. На місці його відкриття у сфері туризму виникла нова унікальна обстановка, що потребує спеціалізованої науково-практичної дослідження.
